FOREWORD

This is the ninth issue of Crops Statistics of the Philippines, an annual publication of the Bureau of Agricultural Statistics (BAS). As in the previous issues, this report presents annual production statistics of 21 major crops and 20 minor priority crops with national and regional levels of disaggregation. These crops are classified into Cereals, Fruit Crops, Non-Food and Industrial Crops and Vegetables and Root Crops. In the case of banana and mango, production statistics are disaggregated by major variety. The reference period is 2007 to 2011.

The production statistics are presented in the order of the above crop classification. Each classification is preceded by a brief description of the trends of area, production and yield and the major factors affecting these trends and the major producing regions.

This report was prepared by the Crops Statistics Division (CSD) of the BAS. It serves as a ready reference for various stakeholders in the crops subsector of agriculture. The BAS continuously pursues the improvement of the delivery of its products and services. Hence, it welcomes comments and suggestions from the readers for further improvement of this report.

EXPLANATORY NOTES

Scope and Coverage

Crop production statistics are generated for all regions and provinces except Batanes. Quarterly crop surveys cover all commodities, however, this publication focuses on the following forty seven (47) major and priority crops:

	<u>MAJOR CROPS</u>	<u>PRIORITY CROPS</u>
CEREALS	Palay and corn	
FRUIT CROPS	Banana, calamansi, mango, pineapple	Durian, mandarin, mangosteen, lanzones, papaya, rambutan, orange, watermelon, tamarind
NON-FOOD & INDUSTRIAL CROPS	Abaca, coconut, coffee, rubber, sugarcane tobacco	Cacao, cashew, cotton
VEGETABLES, ROOTCROPS & TUBERS	Cabbage, camote, cassava, onion, eggplant, garlic, mungo, peanut, tomato	Asparagus, broccoli, carrots cauliflower, gabi, ginger, gourd, habitchuelas, lettuce, okra, pechay-chinese, pechay-native ubi, white potato

Sampling Methodology

The sampling design of Palay and Corn Production Survey (PCPS) was based on the results of 1991 Census of Agriculture (CAF). The survey domain was the province. It employ's a replicated two-stage stratified sampling design. The barangay was the primary sampling unit (psu), which was selected using a probability proportional to size (pps) scheme. The farming household served as the secondary sampling unit (ssu), which was selected systematically.

A non-probability survey was employed for *other crops*, crops other than palay and corn. A “5 x 5” design was used in the selection of samples with the province as the domain. The top five (5) producing municipalities were chosen from each province. From each of these municipalities, five (5) sample farmers were selected as respondents.

In this two-stage design, the municipalities served as the primary sampling units (psu), and farm households as the ultimate sampling units (usu).

Data Collection

For cereals, data collection is done quarterly during the first twelve (12) days of the month after the reference quarter. For other crops, quarterly data collection is conducted simultaneously with the monthly Farm Prices Survey (FPS) in the last ten (10) days of February, May, August and November.

Each round of the PCPS generates the following: (1) Final estimate of production for the immediate past quarter of the current survey round; (2) Forecast production for the current quarter based on standing crop; and (3) Forecast production for the next quarter based on planting intentions of farmers.

Data Review and Analysis

Data review and analysis are conducted quarterly to ascertain the accuracy of the data collected from probability and non-probability surveys. These activities start at the Provincial Operations Center (POC) after data processing using prescribed review materials. All provincial estimates undergo further data review at the regional level. All validated regional and provincial estimates are brought to the Central Office for final review. The BAS Director presides over the National Data Review, which is participated in by the Assistant Director and Division Chiefs, Regional Agricultural Statistics Officer (RASOs) and commodity specialists.

Concepts and Definitions

The following concepts and definitions are used in the generation of statistics for crops.

Area Harvested

- The actual area from which harvests are realized. This excludes crop area which were totally damaged. It may be smaller than area planted. In crop statistics, this applies to temporary crops.

- Area Planted** - The actual physical area planted. This generally applies to area reported for permanent crops and multi-harvest temporary crops.
- Bearing Trees/Bearing Hills/Bearing Vines** - The number of trees/hills/vines where harvesting has been made in the past but may or may not have borne fruits or productive during the reference period due to cyclical production pattern of the crop. Hills applies to banana. Vines applies to pepper and grapes.
- Crop Production** - Is the quantity produced and actually harvested for a particular crop during the reference period. It includes those harvested but damaged, stolen, given away, consumed, given as harvester's share, reserved etc. Excluded are those produced but not harvested due to low price, lack of demand and force majeure or fortuitous events, etc.
- Effective Area Harvested** - The actual area which is counted as many times as it was planted and harvested to same crops during the reference period. This concept applies to the harvest area reported for mono harvest temporary crops such as rice, corn, root crops and tubers and pechay.
- High Yielding Variety** - An improved cultivated variety with significantly higher yield and better quality under specific environment and improved farming conditions and practices than the traditional seed varieties being used; or any agricultural crop variety that can equal or exceed the yield of the current commercially grown variety in a particular locality. HYV may be locally or foreign bred.
- Industrial Crops** - Are Crops that are used as inputs to other industries. Examples are: rubber, castor beans, abaca and oil palm.
- Irrigated Palay** - Palay crop that requires standing water for its normal growth, not confined to lowland but also to high places where paddies are built for planting rice, requires irrigation water made available through artificial means (gravity, force, power pumps, etc.)

- Major Crops** - Refer to the top 19 crops in the Philippines, other than palay and corn which collectively account for more than 60 percent of the total crop production. These include coconut, sugarcane, banana, pineapple, coffee, mango, tobacco, abaca, peanut, mungo, cassava, sweet potato, tomato, garlic, onion, cabbage, eggplant, calamansi and rubber.
- Minor Crops** - Are all the remaining crops other than the major crops. This group accounts for about 40 percent of the total crop production.
- Non-Food Crops** - Are crops other than those used for food consumption. These are crops grown for their aesthetic values such as ornamental plants and cutflowers. These also include agriculture-derived products such as rice hay and coconut leaves.
- Permanent/Perennial Crops** - Are crops which occupy the land for a long period of time and do not need to be replaced after each harvest such as fruit trees, shrubs, nuts, etc. These crops may be productive or fruit-bearing crops. Examples are: avocado, coffee, coconut and other fruit trees.
- Priority Crops** - Refer to the identified national banner crops and various regional priority crops of the then Key Commercial Crops Development Program (KCCDP), High Value Crops Development Program (HVCDP) and now the Key Commodity Road Maps of the Department of Agriculture, which are being developed because of their industrial and commercial potentials.
- Rainfed Palay** - Palay crop that depends solely upon rainfall for its water supply; usually planted through transplanting or direct seeding in fields with dikes that retain water. There may be dikes in the field to hold water in the case of lowland-rainfed, or none in the case of upland palay.

- Root Crops** - Crops with well developed underground edible roots. They are classified into roots and tubers. Roots which are more starchy and rich in carbohydrates include gabi, ubi and white potato. Tubers include beets, radish, carrots and turnips.
- Temporary Crops** - Crops which are grown seasonally and which growing cycle less than one year and which must be sown and planted again for production after each harvest.
- Vegetable Crops** - Mostly temporary crops which are either classified agronomically as such or based on purpose for which they are used, like jackfruit which on their young stage, are classified as vegetables.
- White Corn** - Corn grown and used mainly for human consumption, and manufacture of corn by-products such as cornstarch, corn oil, syrup, dextrins, glucose, gluten, etc.
- Yellow Corn** - Corn used mainly as feed grains; includes all types of corn other than white.
- Yield** - Indicator of productivity derived by dividing total production by the area harvested.

II. REGIONAL STATISTICS

A. CEREALS

HIGHLIGHTS

PALAY

The country's palay production over the last five (5) years grew by an average of 0.68 percent annually. From 16.24 million mt in 2007, production went up to 16.68 million mt in 2011. In particular, production in 2011 was 5.8 percent higher in 2010. There was an increase of 182 thousand hectares or by 4.2 percent in harvest area (Figure 1). Central Luzon, Western Visayas, Cagayan Valley, and Ilocos Region were the top producers with a combined output of 8.61 million mt or 51.6 percent of the country's production in 2011 (Figure 2). Area harvested from these regions represented 49.0 percent of the national total of 4.54 million hectares (Figure 2.1).

Figure 1. Palay: Volume of Production and Area Harvested, Philippines, 2007-2011

Figure 2. Palay: Top Producing Regions, Philippines, 2011

Figure 2.1. Palay: Area Harvested by Region, Philippines, 2011

In irrigated areas, palay production was 12.36 million mt. Central Luzon posted the highest production at 2.39 million mt. Cagayan Valley tailed behind at 1.92 million mt. These regions accounted for 34.9 percent of the total irrigated palay production in 2011 (Figure 3).

Figure 3. Irrigated Palay: Top Producing Regions, Philippines, 2011

Figure 4. Rainfed Palay: Top Producing Regions, Philippines, 2011

In rainfed areas, Western Visayas was the top producer with 4.33 million mt or 24.4 percent of the total rainfed palay output. Ilocos Region followed with 10.6 percent share (Figure 4).

HIGHLIGHTS

CORN

Corn production went up from 6.74 million mt in 2007 to 6.97 million mt in 2011. It recorded an average annual growth of 0.35 percent. The 2011 production was 9.32 percent higher than in 2010. There was 45.6 thousand hectares or 1.8 percent growth in harvest area (Figure 5). The major producing regions were Cagayan Valley, Northern Mindanao, and SOCCSKSARGEN which together generated 57.2 percent of the national corn production (Figure 6). Total area harvested from these regions accounted for 47.7 percent of the national total of 2.54 million hectares (Figure 6.1).

Figure 5. Corn: Volume of Production and Area Harvested, Philippines, 2007-2011

Figure 6. Corn: Top Producing Regions, Philippines, 2011

White corn production was highest in ARMM at 647.9 thousand mt or 30.1% of the country's total white corn production. Northern Mindanao followed with 349.8 thousand mt or 16.3 percent of the country's output (Figure 7).

Yellow corn production was highest in Cagayan Valley at 1.54 million mt or with 32 percent of the national production. SOCCSKSARGEN followed with 916.7 thousand mt or 19 percent share on the country's total yellow corn production (Figure 8).

B. FRUIT CROPS

HIGHLIGHTS

BANANA

From 2007 to 2011, banana production registered an annual average growth of 5.20 percent (Figure 1). During the same reference period, area planted and number of bearing hills grew by 0.81 percent and 2.77 percent, respectively.

The 2011 output at 9,165 thousand mt was higher by 0.70 percent from the 2010 level. The increase in production was attributed to additional area planted, increase in number of bearing hills harvested in Davao Region, Northern Mindanao and SOCCSKSARGEN. Also, bigger bunches were harvested in MIMAROPA, Western Visayas and ARMM.

Davao Region, Northern Mindanao and SOCCSKSARGEN were the major producers. These regions accounted to 73 percent of the country's banana production (Figure 2).

Across varieties, Cavendish variety shared about 51 percent of the total banana production followed by saba (Figure 3).

Davao Region registered the largest area planted at 88,379 hectares which comprised 20 percent of the country's total area devoted to banana.

Cavendish variety. Annual production of this variety grew by an average of 8.97 percent from 2007 to 2011. During this reference period, area planted expanded by 2.04 percent and the number of bearing hills at 5.29 percent.

In 2011, the Cavendish production recorded at 4,686 thousand mt was higher by 1.86 percent from the 2010 level. This was due to increase of area planted and number of bearing hills harvested in the major producing regions, namely: Davao Region, Northern Mindanao and SOCCSKSARGEN where most plantation farms were located. These regions shared about 97 percent of the country's Cavendish production.

Davao Region remained the major producer and accounted 63 percent of total Cavendish production. Area planted was 48,741 hectares.

Lakatan variety. During the reference years, 2007 to 2011, production of lakatan variety grew by 1.44 percent yearly. Area planted and number of bearing hills increased by 1.78 percent and 2.45 percent, respectively.

The output in 2011 was higher by 0.56 percent compared to the previous year's level. The growth was contributed to increase in number of bearing hills harvested in Northern Mindanao. Bigger fruits developed and lesser incidence of bunchy tops were noted in SOCCSKSARGEN and Davao Region, respectively.

SOCCSKSARGEN, Davao Region and Northern Mindanao were the top three producers. These regions accounted for 66 percent of the total lakatan production.

Saba variety. From 2007 to 2011, production of saba variety went up by an average of 2.34 percent. Area planted and number of bearing hills posted growth rates of less than one percent during the same reference period.

In 2011, saba production was 2,617 thousand mt down by 0.60 percent from the 2010 record. The reduction was the result of damages brought by typhoons Juan, Pedring and Quiel that hit Cagayan Valley. Infestation mosaic disease was also noted in Zamboanga Peninsula.

Davao Region, SOCCSKSARGEN and Northern Mindanao were the top producers which contributed 46 percent to the total saba production in the country.

HIGHLIGHTS

CALAMANSI

From 2008 to 2011, calamansi production went down annually by an average of 2.45 percent. Area harvested and number of bearing hills rose by an average of less than 1 percent during the same reference period (Figure 1).

In 2011, production at 183 thousand mt was down by 3.07 percent from the 2010 level. The bearing hills were affected by frequent rains during the flowering stage in MIMAROPA and CALABARZON. Typhoons Juan, Pedring and Quiel brought damages to calamansi in Cagayan Valley and Central Luzon.

MIMAROPA was the top producing region which accounted for 58 percent of the country's total calamansi production (Figure 2). The region had 7,989 hectares planted to calamansi and this comprised 38 percent of the total calamansi area in the country.

HIGHLIGHTS

MANGO

From 2007 to 2010, mango production went down annually by an average of 6.24 percent (Figure 1). Area planted and number of bearing trees grew by 0.39 percent and 1.47 percent, respectively.

In 2011, mango production at 788 thousand mt dropped by 4.55 percent from the 2010 record. Less number of bearing trees was induced in Ilocos Region and Central Visayas. The occurrence of continuous rains during flowering stage was noted in Ilocos Region, Cagayan Valley, Central Luzon, Western Visayas, Northern Mindanao and Davao Region.

Ilocos Region was the major producer and shared 35 percent in the country's total mango production (Figure 2). Central Luzon registered the largest area planted to mango at 33,678 hectares.

Carabao Variety. From 2007 to 2011, production of Carabao variety was going down by 6.29 percent annually. Area planted and number of bearing trees increased by 0.68 percent and 2.05 percent, respectively.

In 2011, production was 4.57 percent dropped from the 2010 level. Less application of flower inducers was observed in Ilocos Region, Western and Central Visayas. The occurrence of continuous rain during flowering stage was noted in most regions.

Production in Zamboanga Peninsula increased due to the induction of bearing trees to cater to the export demand.

Carabao variety comprised about 81 percent of total mango production. About 37 percent of this production came from Ilocos Region.

Central Luzon posted the largest area at 24,863 hectares with the highest number of bearing trees.

HIGHLIGHTS

PINEAPPLE

Pineapple production grew by an average of 2.74 percent from 2007 to 2011 (Figure 1). Area planted increased by 2.01 percent during the same reference period.

In 2011, pineapple production was 2,247 thousand mt. This was higher by 2.01 percent from the 2010 level. This was due to the expansion on area planted in plantation farms in Northern Mindanao, namely: Del Monte, Lapaday, MKADC, Asian Hybrid, DAVCO and Dole. Increase in area planted was also noted in Bicol Region.

Northern Mindanao and SOCCSKSARGEN shared about 90 percent in the total pineapple production of the Philippines (Figure 2). These two (2) regions registered the largest areas planted accounting for 77 percent of the total area devoted to pineapple production.

C. NON-FOOD & INDUSTRIAL CROPS

HIGHLIGHTS

ABACA

Area and production of abaca fluctuated from 2007 to 2011. From 2009 to 2011, production went up annually by an average of 2.10 percent while area expanded by 1.72 percent. Abaca production improved by 3.16 percent to 68.61 thousand mt in 2011 from 66.51 thousand mt in 2010 (Figure 1). Favorable weather in Bicol Region, the availability of spindle machines extended by private companies in Zamboanga Sibugay, and the high demand and satisfactory price of abaca fibers induced harvesting of abaca. Likewise, output of Western Visayas went up as a result of replanting program of the DA and LGUs of Aklan. Area planted in 2011 also increased by 3.47 percent to 139.77 thousand hectares from 135.09 thousand hectares in 2010.

Bicol Region was the top producer of abaca fiber in 2011. The region produced 22.65 thousand mt of abaca or 33.0 percent of the country's total production. In spite of the continuous incidence of bunchy tops and mosaic diseases, Eastern Visayas was the 2nd top abaca producer with 20.02 thousand mt

of output share at 29.18 percent. The other major producers were Davao Region with 9.23 thousand mt or 13.45 percent share and Caraga Region with 6.03 thousand mt or 8.79 percent contribution to the national production (Figure 2).

HIGHLIGHTS

CACAO

Cacao production decreased by an annual average rate of 1.87 percent from 2007 to 2011 (Figure 1). Annual average decreases in area planted, number of bearing trees and yield per bearing tree were 1.02 percent, 1.16 percent and 0.71 percent, respectively. In 2011, production was 4.86 thousand mt, 3.25 percent lower than the level of 5.02 thousand mt in 2010.

The top producing regions and their contributions to the national output in 2011 were Davao Region, 74.48 percent; Northern Mindanao, 8.16 percent; Eastern Visayas, 2.4 percent; and Zamboanga Peninsula, 2.31 percent (Figure 2).

HIGHLIGHTS

CASHEW

Cashew production went up yearly by an average of 4.34 percent from 112.56 thousand mt in 2007 to 133.89 thousand mt in 2011 (Figure 1). Area planted to cashew, likewise, increased annually by an average of 0.57 percent from 27.57 thousand hectares in 2007 to 28.20 thousand hectares in 2011. The number of bearing trees posted an average yearly increase of 1.94 percent from 2007 to 2011.

MIMAROPA, the top producer of cashew, contributed 93.77 percent to the country's production in 2011 (Figure 2). Central Luzon put in 5.11percent.

HIGHLIGHTS

COCONUT

Coconut production in 2011 was 15.24 million mt. From 2007 to 2011, it grew by an average of 0.65 percent annually (Figure 1). Average yield increased to 44.83 kilograms per bearing tree in 2011 from 43.85 kilograms per bearing tree in 2007 (Table 4.4a). These increases were brought about by the high price of copra, fertilization program and disease control interventions of the Philippine Coconut Authority (PCA). However, from 2010, production went down by 1.71 percent in 2011 due to the adverse effects of the dry spell in 2009. The incidence of pests such as scale insects or *aspidotus destructor* in the municipalities of Calaca and Lemery in Batangas and *brontispa longissima* in some parts of Curuan District in Zamboanga City also contributed to the decline in production.

From 2007 to 2011, area planted and number of bearing trees continued to increase by respective average annual rates of 1.47 percent and 0.10 percent.

The top coconut producer was Davao Region with contribution of 17.23 percent to the national production in 2011. The other major producers were Eastern Visayas, Northern Mindanao and Zamboanga Peninsula. Each of these regions shared about 10 percent in the national production (Figure 2).

HIGHLIGHTS

COFFEE

Throughout the period 2007-2011, coffee production is going down by an average rate of 2.48 percent annually (Figure 1). In 2011, coffee production was estimated at 88.53 thousand mt which was 6.36 percent lower than the 2010 production of 94.54 thousand mt. The declining production was attributed to the cutting of trees due to land use conversion in Davao City and Batangas, and crop shifting to banana in Compostela Valley. Frequent rains in Sultan Kudarat and the reluctance of some farmers in Cavite to invest in fertilization, cultivation and weeding due to low price of coffee also contributed to the decline in production. Area planted and number of bearing trees contracted annually by 0.88 percent and 0.90 percent, respectively (Figure 1).

SOCCKSARGEN was the top coffee producer in 2011 with 30.98 percent contribution to the country's coffee production. The second top producer was Davao Region with 23.12 percent share in the national production (Figure 2).

Of the coffee varieties, Robusta had the highest share of 71.14 percent in the total production of all varieties (Figure 3).

HIGHLIGHTS

COTTON

Cotton production in 2011 at 0.05 thousand mt was 96.29 percent lower than the 1.36 thousand mt in 2007. However, it was 48.09 percent higher than the 0.03 thousand mt of output in 2010 (Figure 1). The increase in output was attributed to the larger area harvested in Ilocos Norte and Negros Oriental.

The top producing regions and their shares in the national output in 2011 were Central Visayas, 82.18 percent; Ilocos Region, 8.99 percent and Western Visayas, 8.83 percent (Figure 2).

Over the period 2007 to 2011, production and area harvested of cotton were highest in 2007 at 1.36 thousand mt and 1.43 thousand hectares. From 2007 to 2011, production and area dropped significantly (Figure 1).

HIGHLIGHTS

RUBBER

Rubber production rose from 404.07 thousand mt in 2007 to 425.71 thousand mt in 2011 or by average yearly rate of 1.31 percent (Figure 1). The 2011 output was 7.71 percent higher than the 395.24 thousand mt of production in 2010. The higher output was due to the increased number of mature trees as a result of the expansion program in rubber producing provinces. From 2007 to 2011, area planted increased by 9.85 percent and number of mature trees, grew by 4.68 percent.

In 2011, the combined output of the top two (2) producing regions of Zamboanga Peninsula and SOCCSKSARGEN was 81.73 percent of the national rubber production (Figure 2). Their combined area and number of mature trees accounted for 71.07 percent and 81.38 percent of the national totals, respectively.

HIGHLIGHTS

SUGARCANE

Sugarcane production registered an annual growth of 6.29 percent from 2007 to 2011 (Figure 1). The trend was fluctuating with the lowest posted in 2010. In 2011, production was 28.38 million mt, 58.27 percent higher than the 17.93 million mt of output in 2010. The decrease was traced to the dry spell during the planting stage in 2009 which subsequently led to a lower area harvested, thus, reducing the 2010 harvests.

In 2011, Western Visayas was the largest producer sharing 15.42 million mt or 54.34 percent in the total sugarcane production (Figure 2). Also, the region had the largest area harvested of 214.66 thousand hectares which was 48.82 percent of the country's sugarcane area (Table 4.8).

HIGHLIGHTS

TOBACCO

From 34.29 thousand mt in 2007, tobacco production, dropped by 5.31 percent to 32.47 thousand mt in 2008. From there, it went up by an annual average rate of 11.45 percent from to 44.94 thousand mt in 2011 (Figure 1). In the same period, area harvested to tobacco also increased by 13.27 percent annually, from 22.18 thousand hectares to 32.24 thousand hectares. The increases were the result of crop shifting from corn, garlic and tomato due to assurance of market in the top producing provinces of Ilocos Norte and Ilocos Sur and the availability of technical and financial assistance from the National Tobacco Administration and the Isabela Leaf in Isabela and Cagayan.

In 2011, Ilocos Region remained as the top tobacco producer and contributed 67.13 percent to the national production (Figure 2).

Virginia tobacco, the most preferred tobacco variety, accounted for 47.72 percent in the national output. Native variety shared 25.69 percent (Figure 3).

HIGHLIGHTS

CABBAGE

During the years 2007 to 2011, cabbage production fluctuated (Figure 1). Outputs were higher in 2008 and 2010 but these were lower in 2007 and 2009. In 2011, production at 125.31 thousand mt was down by 2.83 percent from the 2010 record. Area harvested at 8.55 thousand hectares also decreased by 0.13 percent in 2011. These reductions were mainly due to the effects of heavy rainfall and strong winds brought by typhoons Mina, Pedring and Quiel in Benguet during the second half of 2011.

The Cordillera Administrative Region (CAR) was consistently the top producer of cabbage. In 2011, it produced 98.94 thousand mt or 79 percent of the country's total production (Figure 1a). In the Visayas, Central Visayas led in cabbage production with 7.95 thousand mt. In Mindanao, the top two (2) producers were Northern Mindanao with 5.75 thousand mt and Davao Region with 4.21 thousand mt.

HIGHLIGHTS

CAMOTE

Camote production continuously decreased at an average annual rate of 2.59 percent. From 573.73 thousand mt in 2007, output went down to 516.34 thousand mt in 2011. Area harvested also showed a downward trend; from 117.58 thousand hectares in 2007, it settled at 103.70 thousand hectares in 2011 (Figure 2). However, yield per hectare was increasing from 4.88mt in 2007, it went up to 4.98mt in 2011 and registered an average annual growth rate of 0.51 percent (Table 5.2).

Eastern Visayas was the top producer in 2011 with 118.98 thousand mt or 23.04 percent of the national production (Figure 2a). The second largest producer was Bicol Region with 92.12 thousand mt, followed by Western Visayas with 45.34 thousand mt (Table 5.4). Their respective shares to the national camote output were 17.84 percent and 8.78 percent (Figure 2).

HIGHLIGHTS

CASSAVA

Cassava production grew at an annual rate of 4.25 percent from 2007 to 2011. The country came up with 2.21 million mt in 2011 (Figure 3). The output gain was traced to the continuous expansion of contract growing areas, particularly, in Isabela, Negros Oriental, Bukidnon and Misamis Oriental. The presence of cassava chips traders encouraged farmers to increase their cassava areas in Northern Mindanao, Lanao del Sur and Basilan. Average yield had continuously increased; from 8.93 mt per hectare in 2007, it went up to 9.99 mt per hectare in 2011 with an average annual growth of 2.85 percent.

ARMM with 1.01 million mt of production in 2011 remained as the top producer (Table 5.3). It accounted for 45.59 percent of the country's total production in 2011 (Figure 3a). Northern Mindanao ranked second with a share of 24.94 percent and Central Visayas with a share of 5.80 percent in the national production.

HIGHLIGHTS

EGGPLANT

Eggplant production fluctuated during the reference years. From 210.16 thousand mt in 2007, it went down to 207.99 thousand mt in 2011. It decreased by an average rate of 0.21 percent (Figure 4). Area harvested also declined from 21.61 thousand hectares in 2007 to 21.38 thousand hectares in 2011 at a decreasing rate of 0.27 percent. However, yield per hectare increased from 9.72 mt in 2007 to 9.73 mt in 2011.

In 2011, Ilocos remained the top producer of eggplant with 75.38 thousand mt which accounted for 36.24 percent of total production in the country (Figure 4a). CALABARZON trailed second with an output of 36.40 thousand mt or 17.50 percent to the national output. Cagayan Valley followed with 19.32 thousand mt or 9.29 percent of the total eggplant production.

HIGHLIGHTS

GARLIC

From 2007 to 2011, garlic production was decreasing continuously by an average of 5.29 percent annually (Figure 5). The downtrend in production was due to reported crop shifting to native onion and tobacco in Ilocos Norte as farmers were unable to compete with the low-priced imported garlic in the market. Area harvested also decreased by 7.35 percent every year.

Ilocos Region was the leading garlic producer; in 2011, it came up with 6.03 thousand mt and shared 66.63 percent in the country's total production (Figure 5a). MIMAROPA came next with 2.16 thousand mt or 23.86 percent of total production in the country.

HIGHLIGHTS

MONGO

Mongo production fluctuated with an upward trend from 29.07 thousand mt in 2007 to 32.96 thousand mt in 2011 at an average rate of 3.73 percent (Figure 6). Area harvested also increased at an average annual rate of 3.96 percent. However, yield per hectare decreased from 0.75 mt in 2007 to 0.73 mt in 2011.

Ilocos Region remained the largest producer with 11.08 thousand mt or 33.62 percent of the country's total mongo production in 2011. Cagayan Valley ranked as second largest producer with 10.03 thousand mt or 30.42 percent of the total production; followed by ARMM, 2.72 thousand mt or 8.27 percent share; and Central Luzon, 2.55 thousand mt production or 7.75 percent share to the total production (Figure 6a).

HIGHLIGHTS

ONION

Onion production from 2007 to 2011 decreased by an average of 2.96 percent annually. It was 128.39 thousand mt in 2011. Similarly, area harvested was going down by an annual average rate of 1.90 percent. From 15.88 thousand hectares in 2007, it decreased to 14.64 thousand hectares in 2011 (Figure 7). Yield per hectare was also decreasing and in 2011, it was 8.77 mt.

Central Luzon, Ilocos Region, and MIMAROPA were the country's top onion producers in 2011 (Figure 7a).

HIGHLIGHTS

PEANUT

Peanut production decreased from 31.21 thousand mt in 2007 to 29.62 thousand mt in 2010. Average annual drop was 1.16 percent. In 2011, production recovered by 0.37 percent at 29.73 thousand mt. Area harvested also decreased from 28.32 thousand hectares in 2007 to 26.90 thousand hectares in 2011 at an average annual rate of 1.25 percent (Figure 8). Yield per hectare increased from 1.10 mt in 2007 to 1.11 mt in 2011.

Thirty nine (39) percent of peanut produced in the country were from Ilocos Region (Figure 8a). The other top producing regions were Cagayan Valley (4.4 thousand mt), Northern Mindanao (2.9 thousand mt), Central Visayas (2.0 thousand mt) and Central Luzon (1.8 thousand mt) (Table 5.8).

HIGHLIGHTS

TOMATO

Tomato production moved upward from 188.76 thousand mt in 2007 to 204.27 thousand mt in 2010 by an average annual growth rate of 2.67 percent, but it slid to 203.58 thousand mt in 2011 or by 0.34 percent. Area showed the same increasing trend from 2007 to 2010 at an average annual growth rate of 0.23 percent. In 2011, area harvested was 17.55 thousand hectares or 0.65 percent lower than its 2010 level (Figure 9). Average yield per hectare recorded an annual growth rate of 1.91 percent from 10.76 mt in 2007 to 11.6 mt in 2011 (Table 5.9).

Ilocos was the consistent top producer with 68.58 thousand mt of production in 2011 or 33.69 percent of the country's total tomato production (Figure 9a). The other top producing regions and their shares to total production were Northern Mindanao, 25.00 percent; Central Luzon, 10.55 percent; and CALABARZON, 8.99 percent.

HIGHLIGHTS

OTHER VEGETABLES

Figures 10, 11 and 12 show the trends of production of other vegetables. Production of asparagus, gourd and ubi continuously decreased from 2007 to 2011 at an average rate of 30.16 percent, 3.07 percent and 11.38 percent respectively. Only broccoli production managed to increase continuously at an annual average growth rate of 5.06 percent. From 2.37 thousand mt in 2007 output went up to 2.88 thousand mt in 2011. Production of the rest of the other vegetables production show fluctuating trends from 2007 to 2011.

Production of carrots in 2011 was 67.16 thousand mt, it decreased by 6.86 percent from the previous year's total. Carrot production, on the average, increased by 0.94 percent from 2007 to 2011. Likewise, Chinese pechay and white potato followed the production trend of carrots.

Production of other vegetables such as gabi, habitchuelas, and native pechay increased in 2008 but continuously decreased from 2009 to 2011. On the other hand, production of lettuce and okra increased from 2008 to 2010 but both dropped in 2011.
